

Flexidock™ Inflatable Dry-Docking System

Protect your hull, *anywhere* on the water

The revolutionary Flexidock™ inflatable dry-docking system gives you more freedom than ever before. By creating a layer of air between your hull and the surrounding water, the Flexidock™ keeps your hull dry - right there on the water. Flexidock™ does for your boating pride and joy what a garage does for a luxury car. *If you bought a Porsche, would you park it on the street?*

- Protect your hull against harsh marine environments or collisions
- No more expensive dry docking fees to get your boat cleaned
- No more expensive, corrosive, and environmentally damaging anti-fouling treatments

Manufactured by

Flexitank (Australia) Pty Ltd

Keep a Flexidock™ on board and protect your boat - wherever you are.

The patented Flexidock™ dry-docking system reduces the need for costly hull maintenance by creating a protective layer of air between your hull and the water around it.

No more toxic anti-fouling

Keeping your hull clean is a must but chemical anti-fouling is expensive, time consuming, environmentally toxic and damaging to your boat's paintwork. Flexidock™ inflatable dry-docking lets you say *good bye to anti-fouling* by ensuring your hull stays clear of barnacles and sea growth, even when there is no land in sight!

No more expensive dry docking fees

By keeping your hull dry and out of the water, Flexidock keeps vital components such as shafts and propellers dry and eliminates damage via electrolysis and osmosis. Dry-docking your boat for cleaning and protection is a thing of the past along with the fees, fuel and labour costs that go with it.

How does Flexidock™ work?

Flexible air tubes and an immersed sleeve and netting system are simply inflated around your boat. Once your boat is docked, the automatic bilge system supplied with Flexidock™ goes to work! Any water inside the Flexidock™ sleeve is pumped out leaving your boat floating on a layer of netting and surrounded by air.

Thanks to advanced sensory pumps, Flexidock™ will even keep your hull dry when it's raining!

Flexidock™ Benefits:

Easy to store. Flexidock™ folds down to 1/10th of its inflatable size to store away in standard bulkheads.

No complicated setup or pack up. Simply unfold your Flexidock™, connect the pumps while you're in the water and let Flexidock™ get to work! When you're ready to pack up, the automatic deflate makes the whole process easy.

Durable design rigorously tested for safety. Flexidock™ is Australian designed and made using the highest quality European fabrics. As part of the Flexitank (Australia) range Flexidock™ is rigorously tested to ensure safe buoyancy, even if damaged.

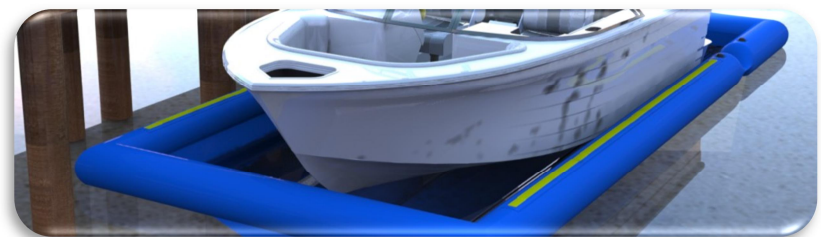

Suits all types of docking entry. The universality of the Flexidock™ design lends itself to both forward and reverse entries. Why should you be tied to using your dock in only one way?

Peace of mind with an unrivalled warranty. Flexidock™ FT305 PVC model comes with 3year warranty while FT3007 Poly Urethane alloy model has a 6 year warranty as standard.

Enjoy all year access to your boat. With a maintenance free hull protection you can carry with you, you will be free to enjoy your boat without being tied to regular dry docking stops.

Every Flexidock™ is supplied with:

- Flexidock™ air tubes (with internal foam support), immersed sleeve and netting to surround the vessel
- Durable Flexidock™ storage bag
- Super strong and durable inflation and deflation air pump
- Automated submerged bilge pump system with attachments
- Detailed installation guide & full warranty documentation

You wouldn't park a sports car in the street. Keep a Flexidock™ on board and protect your boat - wherever you are.

Contact Flexitank (Australia) today to discuss your Flexidock™ requirements and learn how you too can eradicate all anti fouling requirements and be *in* your boat instead of *working* on your boat!
